Joinery

Mastercraft's vast experience and attention to detail has made the company the obvious choice for the joinery element of many prestigious projects. With dedicated supervision on each project, an excellent joinery workforce and exceptional customer service, Mastercraft has continued to build an admirable reputation as a high quality and professional joinery contractor with clients availing of our services time and again.

Claridges Map Room

At the iconic London luxury hotel Mastercraft was responsible for the conversion of the existing hairdressing salon into the Business Person's Relaxation Area now known as 'The Map Room'.

The company's on-site management team co-ordinated all of the specialist sub-contractors from M&E Contractor to the wall-panelling and furniture manufacturers.

Hat Factory Soho London

This project saw the reshaping of two Victorian factory buildings of historical significance built by Henry Heath, one of London's best known hatters, into eight contemporary loft-style apartments right at the heart of London's vibrant West End.

Mastercraft Construction was employed throughout this contract at various stages in its development. In the early part we erected timber frame buildings on existing flat roofs

to extend the floor areas of the new apartments. As the complex refurbishment works progressed Mastercraft provided management support to the Main Contractor to keep the project on target for an ambitious completion date.

Dobbies UK

Founded in 1865 Dobbies Garden Centres have been a long established brand in horticulture. When Dobbies implemented an expansion programme it led to Mastercraft being involved in the joinery elements of a timber inspired design for the stores. We carried out work on several new builds across the UK and refitting existing stores. The joinery elements included a timber cladding system to the exterior facades of the stores, bespoke fencing and a high end internal fit out.

Mastercraft became involved in the joinery elements of a timber inspired design for their new stores. To date we have carried out work on Dobbies Garden centres in Lisburn, Glasgow, Kent, Carlisle, Peterborough, Liverpool, Gillingham to name but a few.

Lyric Theatre Belfast

Mastercraft was involved in the structural timber elements which included forming the tiered auditorium seating, Proscenium doors, Balconies and Arches above the Main Auditorium. The acoustic ceilings in both the rehearsal and studio spaces were also included in our contract.

Our previous experience in other theatres such as the Waterfront Hall, Grand Opera House extension, Market Place Armagh, and the Strule Arts Centre Omagh, together with our highly skilled workforce enabled us to bring the Architect's vision of this project to life.

Frank Gehry Pavilion Hyde Park

The 'Pavilion', designed by Pritzker Prize winning architect Frank Gehry, was constructed at the Serpentine Gallery in Hyde Park, as a temporary installation. It was later acquired by a private art collector, who appointed Mastercraft Construction to relocate the structure to his estate in the South of France.

Following the careful disassembly and transport of all the components, including steel, timber and glass, the Team moved to the 'New' site to rebuild the Pavilion at its permanent home.

John Heah Rooms, Berkeley Hotel London

Mastercraft have carried out several successful contracts at the Berkeley Hotel, a highlight of which must be the series of rooms designed by award winning architect John Heah.

Mastercraft were able to source the required materials from all over the world including silk from Thailand and sustainable woods from Sweden and then work closely with the architect to execute his bespoke design. These luxury rooms are the height of quality and craftsmanship and stand out even in this world class hotel.
